

**Dr. Bart Ankersmit** is a Senior Researcher at the Cultural Heritage Agency of the Netherlands in Amsterdam (RCE). After receiving his Doctorate in Inorganic Chemistry, Ankersmit started working at the RCE in 1996. His work began with a four-year EU project on the preventive conservation of silver artifacts and has shifted to managing risks to collections. In 2009, Ankersmit published the new climate guidelines for Dutch museums, *Managing Indoor Climate Risks*, in which a decision-making process was presented that balances the value of the building and the objects with climate risks to find an optimal mitigation strategy. An updated and translated version was released in 2016.

**Renate van Leijen** is the Advisor of Safe Heritage at the Cultural Heritage Agency of the Netherlands in Amsterdam (RCE). The Safe Heritage program at the RCE focuses on risk and crisis management, emergency planning, incident registration, and collection assistance with special attention given to awareness and prevention. They share information, develop products and services with and for the heritage managers, heritage advisors, and directors.
